Karl,

Thanks for all your help yesterday, and keep me posted on both the potential work occurring at Morrow Lake and the results of your Lake Trout fishing.

My contact at Georgia-Pacific is Garry Griffith 734.735.0780 <gtgriffi@GAPAC.com>

thanks again,

Jim

Subject: SWAC info

Jim,

Couple notes on our call.

1. Consider using a foodweb model to provide an independent assessment of the current SWAC. The assessment can assume various exposure areas of smallmouth bass. If collected in late summer, I'd go 0.5 mi of river (or less). I suggest working with Larry Burkhard (ORD-Duluth); if you want to hit Ells up for some SSRC funding (just have to email him), I can assist with developing an approach.
2. If you want a good person to advise on the SWAC back and forth, I'd talk with John Wolfe, LimnoTech, he's excellent with geostatistics and very thoughtful. I'd put him on par with Kern. LimnoTech is actually working for EPA at Enbridge, so I don't think they're conflicted on the Kzoo. I can get you contact info if you'd like.
3. I'll keep you informed about upstream removals and progress. Could you send your GP contact? I know Paul Montney pretty well if he'd be knowledgeable.
4. Most important, March 21-24, I head up to Snowbank Lake, WNW of Ely, for some laketrout ice fishing. Just the thought gives me hope!

Cheers,

Karl
